Nitro 9000 BY NITRO HEAT

"Profit in your Pocket"...

That's what it's all about...and where is the biggest bottleneck in the shop? The paint dept...and where is the greatest profit potential? Also in the paint dept. Painting with Nitrogen, in place of compressed air, will produce shorter cycle times; a deeper luster in your clears; less overspray in the booth; longer filter life; cleaner paint work; and here's the big one... a Guaranteed 15% minimum reduction in wet material costs vs compressed air! In fact many shops using nitrogen are seeing material reductions upwards of **20% to 30%!!!**

Nitrogen (commonly known as N2) is an "inert" gas...meaning it won't expand or contract, and in painting...that's BIG!!!

That's why every NASCAR race car and many higher end vehicles run nitrogen in their tires...In fact the "NITRO 9000" system comes standard with a "Tire Tank" included, allowing you to fill your customers tires with nitrogen... generating more "Profit in your Pocket".

The "Nitro 9000" uses an unprecedented 5 stage "air scrubber" filter system to deliver the purest, cleanest, "Schedule D" comparable air to the membrane "stick" where the nitrogen is extracted... unwanted gases are filtered out, and the "fluid carrier" (nitrogen) is delivered to the painter. With a 5 filter system we can offer a 5 year limited warranty on our nitrogen membrane stick.

15% Guaranteed

Material reduction when used in conjunction with the Nitro "HOTBOX" and Nitro Air Line.

**5 YEAR
LIMITED WARRANTY**
